

Vibrational Charged Products

(Directions Below)

What kind of HCG is this?

This alternative to HCG is vibrationally, not homeopathically, formulated. In classical homeopathy, a minute, infinitesimally small amount of a substance (like HCG) is added into a substance like bacteriostatic water or alcohol. Vibrational HCG, on the other hand, is made by acquiring the exact vibrational charge -- the energetic characteristics -- of the HCG and transferring them into a more stable/beneficial substance (like glycerine).

Where is it formulated?

Our HCG is formulated in a federally-registered pharmaceutical laboratory, in the United States, in full compliance with FDA regulations governing pharmaceutical manufacturing facilities. Regular inspections by the FDA ensure compliance with current Good Manufacturing Practices (cGMPs) and the Code of Federal Regulations (CFRs) for your safety. The manufacturer comports to the following manufacturing standards:

- cGMP compliant
- HACCP compliant
- Kosher (Kashrus) certified (and OU Passover qualified)
- Halal compliant
- Vegan compliant

How is it manufactured?

1. The direct vibrational charge ("vibrational signature") of 1x diluted, pharmaceutical-grade Human Chorionic Gonadotrophin (HCG) is acquired.
2. A substrate composed of pure, all-natural, 100% Kosher, USP food grade vegetable glycerine (defined as a tri-polar glycerol) is also acquired.
3. Using radionic imprinting, the in-phase energetic frequency of the HCG is captured and infused (electrochemically bonded) into the glycerine.
4. Thyroid-stimulating ionic iodine is layered into the blend at a 4000X concentration.
5. Botanical raw extracts (including peppermint, hoodia, essential oils/antihabitants and gymnema leaf) are layered into the blend. These extracts boost energy and suppress appetite and sugar cravings.

What's the dosage?

The dosage use of the finished product is now predicated on each individual's own unique degree of bio-energetic resistance (or "energetic sensitivity") and utilized accordingly (e.g., the higher the resistance, the higher the dosage; the lower the resistance, the lower the dosage). Most consumers start with 10 drops 3 times a day, then adjust their dosages accordingly. (see my directions below)

How is Vibrational HCG better formulated than Homeopathic HCG?

1. It's more readily absorbed by your body.

Homeopathic HCG is often mixed with alcohol (di-polar ethanol). Alcohol is a diuretic (which means it mixes tightly with water, and in ridding itself of alcohol, the body also removes a great quantity of water). This causes cell membranes to dry and harden, slowing absorption. Because of this, the metabolized alcohol may likely inhibit fat loss (because your metabolism will slow if you are even slightly dehydrated).

Vibrational HCG uses pure, 100% Kosher, USP food grade vegetable glycerine (tri-polar glycerol) as its delivery vehicle. This non-toxic, commonly-used natural food substance has a moistening effect on tissues, thereby opening them up to allow a faster absorption of the vibrational charge and material.

2. It's more stable.

Homeopathic HCG undergoes a variety of influences that potentially degrade effectiveness.

* Shipping: Hahnemann (the founder of homeopathy) warned against shipping liquid remedies over long distances, since they receive "an enormous number of additional succussions during the transport, and they are so highly potentized during a long journey, that on their arrival they are scarcely fit for use, at least not for susceptible patients, on account of their excessive strength, as many observations go to prove" (Bradford, Thomas L, Boenninghaussen, The Lesser Writings, p. 736).

* Radiation: Homeopathic formulations are also subjected to X-rays, which also tend to degrade effectiveness.

Vibrational HCG, however, is made by electrochemically bonding the HCG to glycerin. Because of this far stronger chemical bonding, the rigors of transport, X-rays, sunlight etc. have no effect on its effectiveness.

Directions:

How Many Drops Do I Need?

Reduce 1x (Alternative HCG Product): Not everyone needs the same dosage. Most manufactures directions will say 10-20 drops 3 times a day. Based on my experience, people do the best taking 12-15 drops 3 times a day. Very few people feel satisfied with only 10 drops.

With each 2 oz order, I provide an oral syringe to help people measure more accurately. .5ml is about 14 drops. A 2 oz bottle is 60 ml. It should last up to 40 days taking it 3 times a day. If you only want to take it twice a day, increase the dosage to .75ml. To get maximum advantage of the appetite suppressant, try to take 30 minutes before you eat.

Control 10x (Appetite Suppressant & Energy Boost): 10-15 drops 3 times a day 30 minutes before meals if possible. This product is great for portion control or losing a few pounds instead of doing a round of HCG. It can be taken continuously or for 1 day. You can combine it with HCG, but you must still eat 500 calories a day even if you don't feel like it. (non hcg product)
